

Learn How XFERALL

Can Work for D.C. Hospitals and Behavioral Health Partners

As hospitals deal with staff shortages and patient surges, emergency department boarding times are increasing. Patients with acute psychiatric issues are waiting in hospital emergency departments for three to five days or more before being admitted to an inpatient behavioral health facility.

Partnering with XFERALL to address the behavioral health crisis by providing our members tools and resources is critical in our commitment to safe, high-quality patient care for all individuals our hospitals serve.

Hospital Association*

Faster Placement. Improved Outcomes. Reduced Staff Burden.

Equips clinicians with a simple platform that beacons one request for placement to as many behavioral health facilities as the clinician chooses

Reduces patient transfer times by 80 to 90 percent with an automated, real-time, collaborative communications platform

Promotes real-time communication among all providers and facilities

Provides a historical record of all patient transfer requests and tracking for response times and reasons for patient denials

Preferred solution partner by the District of Columbia Hospital Association

XFERALL and D.C. hospitals will work together to deliver solutions that address the serious challenges of crowded emergency departments, clinician burnout, and delays in care. **XFERALL reduces patient transfer times consistently by 80 to 90 percent across the network** and is aligned with the National Guidelines for Crisis Care and SAMHSA best practices.
