

Monthly Utilization Report

August 2024

Highlights

All except one of the focus utilization metrics saw an increase in volumes going from July to August 2024 compared to 2020 pre-COVID baselines. Psychiatric admissions present the biggest jump in numbers going from -29% below the baseline in July, to -23% in August. Comparatively, ambulatory surgeries changed going from 1% to 3% over the baseline in July and August respectively. Acute care admissions also saw a slight increase in volumes from July to August going from -16% to -14% below the baseline, while observation admissions volumes also increased going from -13% below in July to -11% in August. Emergency department visits is the sole metric with declining volumes going from -25% below baseline in July to -27% in August (see Fig. 1 below).

See Next Page for More Data

Monthly Utilization Report

August 2024

Highlights

Although psychiatric admissions remain below the median in August, there is an uptick in volumes starting in July 2024 as shown in Fig. 2 below. This is depicted in Table 7 of the report with all but one hospital showing an increase in volumes in August 2024. Conversely, involuntary admissions went down compared to last month's volumes as pictured in Fig. 3.
