

Highlights

Conducting a 12-month comparison, focus utilization metrics for March and April 2026 show only slight fluctuations when compared to March 2025. Observation admissions present the biggest increase in volumes at 6% and 8% over March 2025 utilization for March 2026 and April 2026 respectively. Ambulatory surgery visits decreased 1% in March 2026 compared to March in the prior year and was only 1% higher in April compared to the March 2025 utilization. Psychiatric admissions showed slightly more variation with a 2% increase in March 2026 compared to March 2025 and a 6% decrease in April 2026 when compared to the same 2025 baseline (see Fig. 1 below). Of note, MedStar Washington Hospital Center, Sibley Memorial Hospital and St. Elizabeths Hospital all saw their highest utilization since February 2025 during the month of March 2026 (see Table 7 of report). Although MedStar Washington Hospital Center also reported their highest level of civil commitments since February 2025 in March 2026, civil commitments show a declining shift overall since October 2025 (see Chart 4 of report). Additionally, the percent change for average newborn admissions indicates a decline of 12.82% when comparing the most recent three-month period in 2026 (February – April) to the same three-month period in 2025 and a decline of 10.95% when comparing the most recent 12-month average with the prior 12-month period average (see Table 11 of report). As a note, the last three months and last 12 months percent change comparison for Cedar Hill Regional Medical Center GW Health is marked N/A for data tables throughout the report as Cedar Hill opened in April of 2025.
